## S 737 Corridor<sup>®</sup> Matt

Ready-to-use floor polish

**Ingredients:** <5% nonionic surfactants, contains preservation agents and perfumes. Other ingredients: care components, water-soluble solvents, auxiliary agents.

<b>Ecolabel</b>	<b>Percentage of readily biodegradable components according to OECD 301 or REGULATION on detergents</b>	<b>Theoretical oxygen demand</b>	<b>Phosphorus content (calculated as elemental phosphorus)</b>
	19.9 %	540 mg / g	0.8 mg / g

If used as intended, the product does not get into wastewater until its eventual stripping. Non-readily biodegradable components precipitate during sewage treatment and get into the sludge. The other organic components are for the most part degraded during the usual process time of sewage in treatment plants. Remnants eventually released into natural waters are immediately subject to further degradation processes and will soon disappear from the environment.

The water-soluble solvents evaporate during the application of the product (i. e. during the drying of the floor finish) and enter the environment in a diffuse manner via the atmosphere. Here they are subject to biological as well as abiotic degradation processes.
